

**Pacific NW Rocks and Minerals**  
**GEO143 Activity 4: Mt. St. Helens**

Name: \_\_\_\_\_ Date: \_\_\_\_\_

Form into groups of three to four. Spend ten to fifteen minutes discussing the Mt. St. Helens Eruption documentary. Share the two most interesting things you learned from the video.

Take notes of what your group members share with you. Here is some space.

Afterwards, we will go around the room and each person will share one thing that one of their group members shared with their group.

Finally, spend fifteen minutes to write a few paragraphs describing (1) your most interesting lesson and (2) one most interesting lesson from each of your group members. Use the back of this sheet of paper if you need it.
